FICTIONAL CLINICAL NOTE ? ALTERNATE CASE
Patient: TAYLOR SAMPLE
DOB: 01/10/1960
MRN: ALT-200002
The patient is clinically stable. A 6 mm right middle lobe nodule has been unchanged on imaging for 24 months.
The nodule is not considered suspicious for malignancy. No biopsy or tissue diagnosis is recommended.
Annual imaging surveillance is appropriate. Robotic-assisted biopsy is not clinically indicated for this finding.
There is no documented contraindication to bronchoscopy.
