FICTIONAL CT CHEST REPORT ? ALTERNATE CASE
Patient: TAYLOR SAMPLE
DOB: 01/10/1960
MRN: ALT-200002
There is a 6 mm smooth solid nodule in the right middle lobe, unchanged compared with the study from 2024.
No spiculated margins or suspicious interval growth are identified.
The nodule is not suspicious for primary lung malignancy.
Lung-RADS Category: 2
Recommendation: Continue annual low-dose CT surveillance. Tissue sampling is not recommended.
